

TECHNOLOGY — EXECUTIVE BRIEFING

AI Governance and Rollout Briefing

Five houses, one platform — what has to be true before it is group-wide

DOCUMENT

STATUS

Illustrative sample

The read

Roll out house by house with separated workspaces, not group-wide with shared ones. The blocking question is not capability but confidentiality between houses, and it is answered by workspace separation rather than by policy.

5 Houses in scope	I Blocking question	3 Houses ready to start	O Shared workspaces recommended
----------------------	------------------------	----------------------------	------------------------------------

READY

- 01 Three houses with a named owner and a first use case.
- 02 Output formats already in use across the group.
- 03 Separation available at the workspace level.

NOT READY

- 01 Two houses without a named internal owner.
- 02 No agreed position on what may cross between houses.

Where the work is done.

THE HOUSE · MCLEUKER HOUSE SET

SO WHAT

A tool nobody has agreed to own is a pilot forever. Naming an owner per house is a cheaper precondition than any technical work in this briefing.

What the rollout has to answer

THE QUESTIONS

QUESTION	ANSWER	INSTRUMENT
Can houses see each other's work?	No, by default	Separate workspaces per house
Who owns adoption in a house?	A named person	Named at onboarding, not after
What may cross between houses?	Nothing without an explicit decision	Group policy, written
Where do outputs live?	In the house's own workspace	Project structure per house
What is retired when this lands?	Named per use case	Adoption fails if nothing is retired

The last row is the one most evaluations skip. If nothing is retired, the new system is an extra step and it will be routed around.

Where it is reported and averaged.

THE GROUP · MCLEUKER HOUSE SET

SO WHAT

Four of the five questions are answered by workspace structure. The fifth is a management decision and it is the one that determines whether anyone uses it.

Five houses, one obligation, and an aggregate that hides four of them.

MCLEUKER HOUSE SET

Sequence

HOUSE BY HOUSE

PHASE 1	Three ready houses Named owner, one use case each, separated workspaces.
---------	---

PHASE 2	Review before extending Against retirement, not against usage. Usage without retirement is not adoption.
---------	---

PHASE 3	Remaining two houses Only after owners are named.
---------	--

ONGOING	Group policy on what crosses Written before, not after, the first request to share.
---------	--

WHAT IS MEASURED

Not measured	Seats, or logins
--------------	------------------

Measured	What was retired, per use case
----------	--------------------------------

Also measured	Time from brief to finished document
---------------	--------------------------------------

Not assessed	Whether output quality differs by house — to be reviewed at phase 2
--------------	---

SO WHAT	Measuring seats measures nothing. Measuring what was retired is the only number that distinguishes a rollout from a subscription.
---------	---

Decisions

DECISIONS ARISING FROM THIS BRIEFING

DECISION	OWNER	BY	IF IT IS NOT TAKEN
Approve house-separated workspaces as the default	Group Technology Director	30 Nov	Confidentiality is handled by policy alone
Name an internal owner in each of the two remaining houses	Chief Executive	15 Dec	Two houses cannot start
Write the group position on what may cross between houses	Group Counsel	15 Dec	It is decided at the first request, under pressure
Measure retirement, not seats, at the phase 2 review	Group Technology Director	31 Mar	Usage is reported as adoption

SOURCES AND BASIS

House readiness — internal assessment at the date of this document.
Workspace separation capability — platform documentation, current.
Output formats in use — group reporting standards.

ILLUSTRATIVE SAMPLE

This document is a rendered SAMPLE of the AI Governance and Rollout Briefing template, produced to show its structure, exhibit inventory and register. The figures in it are illustrative and are not market intelligence. A real run of this template researches and cites its figures with an as-of year for each, or marks them as modelled and states the basis — the rule the template itself carries.
